Integrated software in combination with Ethernet port and Ethernet TCP/IP protocol, for supervision, management and remote control of the CLM8 series intelligent junction boxes.

MAIN FUNCTIONS

- 8 independent channels for load cells: monitoring and direct management of the individual load cells connected.
- Instant anomalies report (also on the connected indicator display).
- All CLM8 series functions can be managed by a W series weight indicator connected.
- Digital equalization: the instrument allows to equalize the connected load cells response in a fast and reliable over time.
- Load distribution analysis on 8 channels with archive backups: storing, retrieving, printing.
- Automatic diagnostics: the instrument is designed to store the percentage value of load distribution for each channel. The diagnostic function makes comparisons between the recorded values and if a significant variation between the values is detected during normal operation, the instrument displays an alarm alternating with the weight value.
 - Depending on the weighing system type it's possible to perform:
 - Load automatic diagnostics: load distribution control in constant barycentre systems (e.g. liquids silo).
 - Automatic diagnostics on zero: check on load cells drift state (eg. silo, weighbridge, platformes).
- Event log: data backups archive in chronological order of the last 50 events related to calibrations, zero settings, errors and equalizations. The information can be stored, retrieved and printed.
- Connections to:
 - PC/PLC via RS485/RS232 (up to 99 instruments with line repeaters, up to 32 without line repeaters) .
 - Remote display and printer via RS485/RS232.
 - max. 16 load cells in parallel.
- Digital filter and anti peak to reduce the effects of weight oscillation.
- RS232/RS485 communication (Modbus RTU) or TCP/IP (option on request) of the divisions for the 8 independent reading channels.
- Theoretical calibration (via keyboard) and real (with sample weights and the possibility of weight linearization up to 5 points).
- Tare weight zero setting.
- Automatic zero setting at power-on.
- Gross weight zero tracking.
- Semi-automatic tare (net/gross weight) and predetermined tare.
- Semi-automatic zero.
- Direct connection between RS485 and RS232 without converter.

CE-M version: 2014/31/UE-EN45501:2015-OIML R76:2006

- Weight subdivisions displaying (1/10 e).
- Three operation mode: single interval or multiple ranges (max 3) or multi-interval (max 3).
- Net weight zero tracking.
- Calibration correction via keyboard is protected through seals for the access to a setting jumper or installer password or hardware device.
- Alibi memory (option on request).
